SUBMERSIBLE RANGE

Accessories - Duck foot Assembly

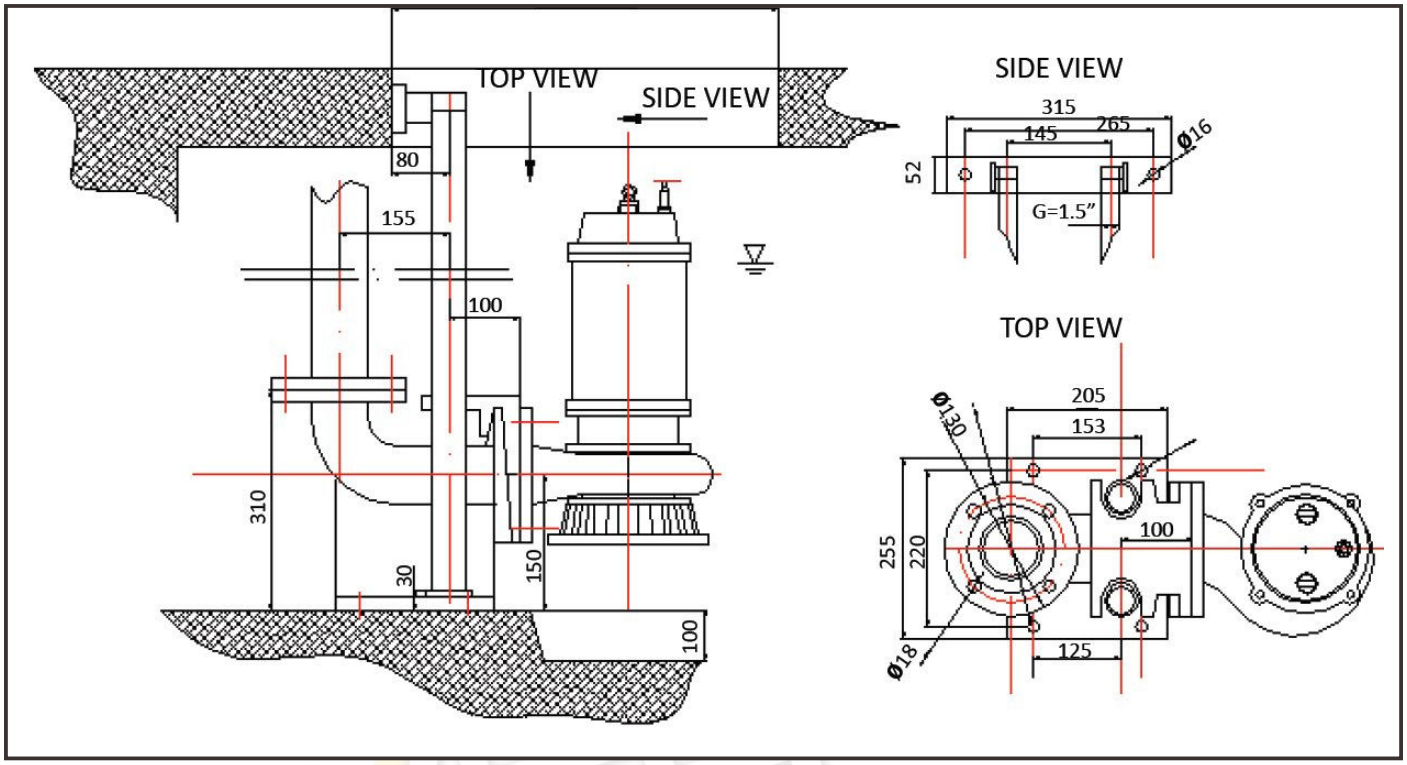

This duck foot assembly accommodates the Vega sewage pumps for fixed installations. It is a rigid, cast iron connection system that connects to the sewage discharge line and ensures easy removal of the pump for maintenance. The duck foot creates a fixed positive seal with the pump's discharge without the use of a flexible hose. It is made of cast iron and consists of a top bracket, sliding foot and duck foot bend. Guide rails are excluded. Note however that the 50mm duck foot requires a 1" thick guide rail, whereas duck foot sizes from 80mm to 200mm need 1.5" thick guide rails.
